Minimum solder distance from EL lamp (body):2.0mm

14.4.2.4. No horizontal press on the EL leads during soldering.

14.4.2.5. 180° bend EL leads three times is not allowed.
14.4.2.6. Solder Wetting

14.5. Operation

14.5.1.   Do not drive LCD with DC voltage

14.5.2.   Response time will increase below lower temperature

14.5.3.   Display may change color with different temperature

14.5.4.   Mechanical disturbance during operation, such as pressing on the display area, may cause the segments to appear "fractured".

14.5.5.   Do not connect or disconnect the LCM to or from the system when power is on.

14.5.6.   Never use the LCM under abnormal condition of high temperature and high humidity.

14.5.7.   Module has high frequency circuits. Sufficient suppression to the electromagnetic interface shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

14.5.8.   Do not display the fixed pattern for long time（we suggest the time not longer than one hour）because it may develop image sticking due to the TFT structure.

14.6. Static Electricity

14.6.1.   CMOS LSIs are equipped in this unit, so care must be taken to avoid the electro-static charge, by ground human body, etc.

14.6.2.   The normal static prevention measures should be observed for work clothes and benches.

14.6.3.   The module should be kept into anti-static bags or other containers resistant to static for storage.

14.7. Limited Warranty

14.7.1.   Our warranty liability is limited to repair and/or replacement. We will not be responsible for any consequential loss.

14.7.2.   If possible, we suggest customer to use up all modules in six months. If the module storage time over twelve months, we suggest that recheck it before the module be used.

14.7.3.   After the product shipped, any product quality issues must be feedback within three months, otherwise, we will not be responsible for the subsequent or consequential events.
